

IntimateTales Coreplugin Configuration Guide

The IntimateTales Coreplugin offers essential configuration options and integration points to ensure a smooth user experience.

Plugin Settings

The Coreplugin provides the following configuration options:

- API Endpoints: Set up endpoints for communication between plugins.
- Integration Hooks: Define hooks for seamless integration with other plugins.
- User Preferences: Configure user preferences and settings.

Advanced Custom Fields (ACF) Integration

The Coreplugin integrates with ACF to allow for additional metadata and settings. ACF JSON files can be used to streamline configuration.

To integrate ACF:

1. Install and activate the ACF Pro plugin.
2. Import the ACF JSON files provided in the plugin's directory.
3. Configure ACF fields and settings according to your requirements.

Integration Points

The Coreplugin offers integration points and hooks for other IntimateTales plugins. Developers can extend functionality by utilizing these integration points.

For a more detailed explanation of each configuration option and integration point, refer to the official documentation.
